## Damage at sea demands highly-skilled specialists

Damage after fires and other accidents on board ships and at offshore installations makes rigorous demands on expertise, experience and safety.

Thanks to the automatic fire-extinguishing equipment on ships and at installations of this type, it will often be possible to limit the primary damage after a fire. On the other hand, the consequential damage caused by soot, chlorides and the water used to put out the fire will often be comprehensive. In addition, it will almost always be necessary to carry out restoration on site - often under very cramped conditions.

## Ready to help world-wide - 24/7

Every hour that a ship or an offshore installation is not in operation has enormous economic consequences. Rapid, goal-oriented measures are therefore absolutely decisive - both to minimize the immediate operating loss and to restrict the consequential damage that could otherwise result in a new breakdown, even greater operating loss and more expensive repairs in the long term.

There are teams of dedicated marine and offshore specialists at AREPA's damage control centres who are ready to turn out 24 hours a day. The world is our workplace - irrespective of whether we are working at sea, in shipyards or in port.

## AREPA helps you make the right decisions

Detailed damage analyses begin as soon as AREPA's specialists arrive at the scene of an accident. These initial measures can be carried out very rapidly thanks to the mobile equipment we bring along. The analyses are compiled in a report that provides an account of the extent of the damage and contains recommendations for further measures.

AREPA's expertise is recognised by insurance companies all over the world, which is why our analyses and reports are used everywhere as a basis for making decisions regarding restoration. AREPA can either act as a project manager for local companies or take total responsibility for performing the entire restoration process.

## AREPA - Technical disaster recovery specialists

AREPA is one of the world's leading specialists in the fields of damage analysis, damage control and restoration. We specialize in analyzing and remedying problems caused by corrosion in technical equipment, electrical components and electronic installations that arise after fires and chemical impact from condensation, gases and liquids, etc.

We are all specialists in the marine and offshore sectors and have purpose-built equipment and specially-trained emergency teams at our disposal. Our expertise and know-how are based on more than 40 years' of experience and AREPA has performed projects in more than 60 countries throughout the world.

The AREPA logo is displayed in a bold, yellow, sans-serif font on a blue rectangular background. The letters are thick and closely spaced, with a slight shadow effect. The background of the entire page is a photograph of a port at night, featuring large red and blue cranes, a white ship with "NO SMOKING" written on its side, and lights reflecting on the water.
