

# Manufacturing

Industrial and Manufacturing Equipment is often the largest capital expense for a business. Even a small manufacturing plant's few machines can be valued at well over a million dollars.

After a manufacturing equipment loss, capacity and lead times are the critical issues facing a business. Is there capacity on other machines or at another facility to meet production goals? If not, can an outside company be located to outsource work to without compromising production quality?

AREPA's engineers have years of experience working with repair and replacement vendors, as well as on specialized industrial and manufacturing machines to assist the insured with avoiding the costs and learning curve

associated with the purchase of new equipment. AREPA experts possess the knowledge necessary to help make the right decisions on the most cost effective and timely method necessary to get the insured back into production.

AREPA has experience in a wide assortment of industrial and manufacturing equipment including:

- ▶ **Plastic Injection Molders**
- ▶ **Presses**
- ▶ **Lathes**
- ▶ **CNC Equipment**
- ▶ **Mills**
- ▶ **Ventilation/ Exhaust Equipment**
- ▶ **Production Conveyors**
- ▶ **Pickers/Sorters**
- ▶ **Robotics**
- ▶ **Automation Systems**
- ▶ **Variable Frequency Drives (VFDs)**
